

ABSTRACT OF THE DISCLOSURE

① 2
A method of making a medicinal substance has the steps of providing a material carrier in form of an active medicinal substance in therapeutic dose, providing a potentiated medicinal substance produced by a homoeopathic method from an initial substance possessing a chemical formula and a composition identical to those of the active medicinal substance, and bioenergetically transferring information providing a potentiated medicinal substance produced by a homeopathic method from an initial substance possessing a chemical formula and a composition identical to those of the active medicinal substance, and bioenergetically transferring information from the potentiated medicinal substance to the material carrier.

(54) Title: MEDICAMENT AND METHOD OF TREATING AN ORGANISM WITH MEDICAMENTS**(54) Название изобретения:** ЛЕКАРСТВЕННОЕ СРЕДСТВО И СПОСОБ МЕДИКАМЕНТОЗНОГО ВОЗДЕЙ-СТВИЯ НА ОРГАНИЗМ**(57) Abstract**

The medicament comprises a carrier in the form of an active medicinal substance in a therapeutic dose onto which is transferred, using bioenergetic exchange, information from a potentiated medicament prepared according to homeopathic methods and having the same basic chemical formula or composition as the active medicinal substance. The proposed medicament preferably takes the form of a carrier containing the medicinal substance in a therapeutic dose to which is added (by embedding, dissolving or mixing) the potentiated medicament prepared according to homeopathic methods and having the same basic chemical formula (composition). The active medicinal substance and potentiated preparation can have identical or different medicinal forms. The invention is carried out by introducing the proposed medicament into the organism and by simultaneous action of the (separately prepared) medicinal preparation with the active medicinal substance in a therapeutic dose and the potentiated preparation of identical basic chemical formula (composition).
